Perlane®
Sculptra®
Artefill®
Collagen treatment
Custom controlled-depth chemical peels
Omnilux light therapy
Fractional resurfacing
Photo rejuvenation
Micropigmentation (permanent makeup)

COSMETIC DERMATOLOGY UPDATE

What is ARTEFILL? “Long-lasting,” ARTEFILL is an elegant wrinkle corrective filler that improves over the course of several months and stands the test of time. It is a simple, in-office procedure where you will see results immediately and be able to return to normal daily activities. Artefill is made with unique microsphere-enhanced collagen. It is the ideal solution for those patients who do not want to return for repeat treatments with temporary fillers.

What is SCULPTRA-Aesthetic? It is an injectable that “volumizes” and replaces lost collagen, and provides structure to severely depressed facial tissue loss. Remarkably, SCULPTRA-Aesthetic helps to gradually replace lost collagen. It gives natural-looking results that can last up to two years.

What is DYSPORT and how does it differ from BOTOX? DYSPORT contains the same neurotoxin-A that is in BOTOX except that it is a smaller molecule which results in better diffusion for patients who look to improve the moderate to severe frown lines between the eyebrows (glabellar lines). Dysport generally takes effect sooner and lasts longer than Botox.

What is ZERONA? ZERONA removes fat and reduces inches. Zerona “low-light” laser is the only non-invasive body slimming device in the world that is proven in multiple double blind trials. It painlessly achieves clinically significant results in just two weeks. In addition, fat that is resistant to diet and exercise is reduced. There is zero pain, zero surgery and zero downtime.

What is THERMAGE? THERMAGE uses patented radiofrequency (RF) technology to safely heat the deeper layers of skin, stimulating existing collagen and promoting new collagen growth for younger looking skin. Everyone can expect some collagen. Many patients have seen smoother, tighter skin with less sagging; redefined contours along the jaw line; softening of wrinkles and fine lines around the mouth, eyes and forehead; and tightening of saggy skin under the chin. Non-painful and with no downtime, with the latest generation Thermage CPT, results appear in a single treatment without surgery or injections. **!**
